

Task Prio

... is a to-do list app that helps the user determine which tasks in their life has the most urgency and what they should do first, combined with a colorful and uplifting design. Inspired by how I prioritize activities in my mind.

How it works

1. Create tasks like "Submit project proposal", "Grocery shopping" or "Call mom", define the category and set duration time and deadline.
2. Let it sit overnight, and the app sorts the tasks based on what is most urgent and places it on the top of the list.
3. The prioritization is done by calculating how long ago the task was created and when it needs to be finished within, amongst other factors. This means tasks that have been sitting for a long time become more urgent.
4. Tasks can then be sorted by filter, marked as done or edited.

Significance

The app helps people who have many responsibilities in their lives prioritize what to do first. Automatic sorting and simplicity, minimizes the effort in making the list.
